

Bachelor Module

Tutoring

In this module advanced students are supervising beginner's practical training in cell biology. Aims in our practical module are to deepen and extend individual knowledge in cell biology, instrument handling and lab logistics and gain first experience as team leaders.

In the course-specific module part Cell Biology, future supervisors will be prepared theoretically and practically for their tasks. For this purpose, the most important aspects of the module are repeated and deepened in theory and practice.

Whenever possible theoretical parts are presented via Moodle. Practical training takes place on 4 weekend sessions prior to the Cell Biology module.

All relevant information can be found in Moodle.
